

LOTTO PR STEP-BY-STEP EXECUTION PLAN

Strategy

- Two-step Soft Cutover
- Shadow mode before switch
- Minimal diff per PR
- Rollback must be possible at each step

PR-01 Schema

Add payout field to:

- lotto_market_bet_settings
- lotto_draw_bet_settings

No runtime change

PR-02 Backfill

Command: lotto:backfill-payout

Rule:

- filter active
- order by updated_at DESC, id DESC
- pick first

Generate report:

- success
- ambiguity
- missing

PR-03 Resolver

Create LottoConfigResolver:

- resolveDrawSnapshot
- resolveMarketSetting
- resolvePayout
- resolveLimits

Not used in runtime yet

PR-04 Snapshot

DrawService must snapshot:

- payout
- min_bet
- max_bet
- max_per_number

PR-05 Shadow Mode

Run legacy + new resolver

Compare:

- payout
- min/max

- max_per_number

Log differences

PR-06 Permission

Use ONLY member_lotto_market_policies

Remove fallback logic

PR-07 Audit Gate

Check before switch:

- payout coverage = 100%
- mismatch = 0

PR-08 Runtime Switch

Replace BetService logic:

Validation order:

1. load draw
2. draw open
3. permission
4. market active
5. bet type
6. block
7. min/max
8. max_per_number
9. exposure

PR-09 Admin Sync

Remove:

- member_rate_plans
- override UI

Keep:

- permission (allow/deny)

PR-10 API

Remove member override fields

Keep API structure stable

PR-11 Cleanup

Remove:

- MemberLottoPermission
- LottoRatePlan*

Drop deprecated tables (final)

Deployment Order

PR-01 → PR-11 sequential
Shadow mode MUST run before switch
